

GREAT MEETING YOU AT TORONTO 2026

HOW CAN WE HELP?

 PRAKTIKAI

/ We build Agents that **transact value**, not just generate text.

Three shipped systems where autonomous AI agents make decisions and settle value on-chain.

Vox Veri

VERIFIED HIRING

Voice interviews scored by AI, every question logged to Hedera. In one pilot, screening 200 applicants moved from manual interviews and fake-candidate sorting to a single AI-ranked shortlist, cutting recruiter screening time by 90 percent

AgroTrack

**FARMER / BUYER
MARKETPLACE**

Five autonomous agents run a two-way farmer/buyer market. Built Hedera-native, then ported to Cronos and x402 so payments settle over the mobile money rails farmers already use, no crypto wallet required.

Data Desk

**AGENTIC FINANCIAL
DATA EXCHANGE**

Agents buy market data per query via x402 micropayments, a risk-managed Pay-per-use model instead of a flat seat license. All the financial data you need without the obligations and cost of expensive licensing.

/ HOW WE BUILD AGENTIC LEDGER SYSTEMS

AUTONOMOUS DECISIONS, NOT CHAT

Agents evaluate, negotiate, and act. AgroTrack's five agents match and settle deals without a human in the loop.

LEDGER-NATIVE, NOT LEDGER-DECORATED

Consensus logging and settlement are structural: HCS for tamper-evident audit trails, x402 for sub-cent, on-chain payment.

CHAIN-FLEXIBLE BY DESIGN

Same agent logic, different rails. AgroTrack shipped Hedera-native, then ported to Cronos and x402, settling over the mobile money rails farmers already use rather than requiring a crypto wallet.

THE NUMBER THAT OPENS DOORS

\$0.05

per data query, vs. a flat \$24K/year Bloomberg seat

WHO WE WANT TO MEET

- Founders needing fractional CTO depth
- Projects using agents to move real value
- Trading desks tired of flat data licensing
